

SACO Group

Baby & kids manufacturing · Since 2008

WHO WE ARE

Since 2008, SACO has specialized in the development and manufacturing of baby and kids garments for premium European brands and international retailers. We work across knitwear, circular knit, underwear and accessories, supported by our design studio in Barcelona and our manufacturing platform in China — combining creative direction, technical expertise and responsible production to deliver sustainable, durable garments at industrial scale.

BABY & KIDS PRODUCT RANGE

TRUSTED BY

A selection of brands and retailers we work with:

JACADI · GO BABY GO · ZARA · CARREFOUR

Responsibility by design.

At SACO, sustainability is embedded in technology and process — not added as a final layer. We focus on reducing chemicals, water and waste at the source, prioritizing physical and mechanical solutions over chemical finishes. For baby and kids programs, this approach matters even more: garments worn close to the most delicate skin demand the highest standards of material safety, traceability and long-term performance.

01

MATERIAL SAFETY

Tested for harmful substances. Free from chemical softeners and finishes that wash out.

02

TRACEABILITY

Transparent supply chain supported by digital traceability platforms such as TrusTrace.

03

LOW-IMPACT PROCESS

Mechanical and physical innovations replacing chemical-heavy conventional treatments.

Certifications & Audits

Our production units operate in alignment with internationally recognized standards. Certifications applied per product, material and customer requirements.

GOTS

Global Organic Textile Standard

OCS

Organic Content Standard

RWS

Responsible Wool Standard

GRS

Global Recycled Standard

OEKOTEX

Standard 100

Additional certifications available on request: OEKO-TEX Standard 100, BSCI, Roadmap to Zero, Textile Exchange.

Our innovations.

Through Lowpact Textile Technology — the innovation arm of SACO Group — we develop registered yarn, dye and material technologies that deliver premium quality with significantly lower environmental impact. Three proprietary platforms anchor our offer:

IndiDye®

Natural plant dyes

High-performance natural dyes made from renewable resources — primarily by-products and agricultural waste — through water-based extraction or natural fermentation. Free from petrochemicals and hazardous chemicals, fully biodegradable and ZDHC Level 3 compliant. A genuinely safer color choice for next-to-skin baby garments.

NO PETROCHEMICALS · ZDHC LEVEL 3 · BIODEGRADABLE

SoftSpin™

Premium softness without chemicals

A patented dual-direction spinning technology that delivers exceptional softness through a purely mechanical process. Unlike chemical softeners or silicone finishes that wash out over time, SoftSpin™ softness is built into the yarn structure itself and lasts wash after wash — ideal for babywear that needs to stay soft, safe and durable.

MECHANICAL PROCESS · WASH-DURABLE · LOW PILLING

EcoShān®

Wild-grown tree cotton from Yunnan

A long-staple cotton fibre from cotton trees grown wild in the subtropical highlands of Yunnan, China. Developed through an ecological reforestation project with the Agricultural University of Shanghai, the trees grow without irrigation, pesticides or fertilizers, are hand-picked, and live for over 50 years under FSC-managed forestry — a genuinely responsible high-quality cotton, ideal for premium baby and kids garments.

FSC FORESTRY · NO IRRIGATION OR PESTICIDES · HAND-PICKED

Responsible fibers.

Beyond our proprietary platforms, SACO works with a curated portfolio of certified and lower-impact fibers. Each is selected for its performance, comfort and traceability — and for its suitability for baby and kids garments that demand the highest material standards.

01

Organic Cotton

GOTS · OCS · CMIA

Cotton grown without synthetic pesticides or fertilizers, certified through the full supply chain. The most widely trusted fiber for baby and kids next-to-skin applications — soft, breathable and gentle on sensitive skin.

02

RWS Wool

RESPONSIBLE WOOL STANDARD

Wool sourced from farms certified for animal welfare and responsible land management. Naturally temperature-regulating and renewable — ideal for knitted sweaters, beanies and cold-weather kids programs.

03

Modal

FSC-CERTIFIED PULP

A regenerated cellulosic fiber made from sustainably sourced beech wood pulp. Exceptionally soft, smooth and breathable, with excellent moisture management — a refined, silky alternative to cotton for premium baby pieces.

04

Bamboo

OEKO-TEX · FSC AVAILABLE

A naturally renewable plant fiber producing soft, breathable yarns with moisture-wicking and thermo-regulating properties. We work only with certified mills meeting strict chemical-management standards.

Additional options available on request: BCI Cotton, Recycled Cotton, Recycled Polyester, Recycled Nylon, Recycled Acrylic, Eco Viscose, Polyana®, Veglon® bio-based, and other certified or specialty yarns.

Made in Anhui.

Welcome to SACO production facility in Anhui, China. Spanning 26,000 square meters, our factory boasts a total production area of 18,000 square meters, purpose-built to house three specialized production lines for babywear, socks, and intimates.

Our baby clothing production combines both sewn and fully fashioned knitwear. We maintain 4 sewing production lines alongside 50 flat knitting machines, with a projected anual capacity of 3 million pieces of infant garments.

This comprehensive factory underscores our commitment to delivering reliable, large-scale production across our core product categories.

INDUSTRIAL CAPABILITY

BABYWEAR PRODUCTION LINE

- 4 sewing production lines
- 50 flat knitting machines
- Sewn garments + fully fashioned knitwear
- ~3,000,000 infant garments per year

PLATFORM STRENGTHS

- Integrated supply chain from yarn to finished garment
- Smooth transitions from sampling to large-scale production
- Flexible volumes for capsule and core programs
- Stable capacity with consistent quality control
- Material traceability via TrusTrace

Let's build better baby textiles.
